

## Anatomic Shape

*The SP II Long Stem has the same anatomic geometry and clinical history as its shorter brother.*

## LINK Lubinus SP II Long Stem & Revision

## LINK Lubinus SP II 40 Years of Experience

Shape aligns with anatomy of femur <sup>5</sup>

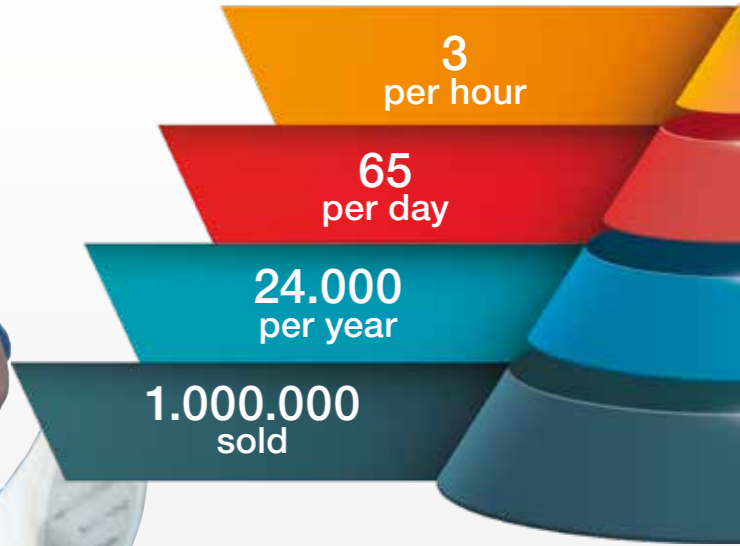

- Physiological transmission of forces <sup>2, 3, 4</sup>
- Strong **neutralisation** of torsion forces <sup>2, 3, 4</sup>
- Built in anteversion matches native anatomy <sup>5</sup>

Successful

Satisfying

Proven

Over 40 years of success <sup>1</sup>

- One of the most used cemented hip stems worldwide <sup>6</sup>
- Extensive clinical follow-up <sup>1</sup>
- Low demand surgical technique <sup>9</sup>

The anatomic design causes satisfaction <sup>6,7</sup>

- Low incidence of peri-prosthetic fractures <sup>11</sup>
- Improved HHS after surgery <sup>4,6</sup>
- Minimised risk of aseptic loosening <sup>10</sup>

Proven through profound clinical data

- Outstanding longterm results <sup>1,8</sup>
- Unchanged for decades <sup>5</sup>
- 92.3% survivorship after 23 years <sup>1,8</sup>
